## XJTLU Entrepreneur College (Taicang)

| | |
|---|---|
| **Module Code and Title** | ENT208TC Industry Readiness |
| **School Title** | XJTLU Entrepreneur College (Taicang) |
| **Assignment Title** | Project Brief |
| **Submission Deadline** | **Friday March 27, 2026 before 23:59 (Beijing Time, GMT+8)** |
| **Session and Group** | [Session 2 — Group 7] |
| **Student IDs** | [2362088, 2361715, 2142462, 2360635, 2252500, 2359885, 2364564] |
| **Final Word Count** | |
| If you agree to let the university use your work anonymously for teaching and learning purposes, please type **"yes"** here. | |

I certify that I have read and understood the University's Policy for dealing with Plagiarism, Collusion, and the Fabrication of Data (available on Learning Mall Online). With reference to this policy, I certify that:

- My work does not contain any instances of plagiarism and/or collusion. My work does not contain any fabricated data.

**By uploading my assignment onto Learning Mall Online, I formally declare that all of the above information is true to the best of my knowledge and belief.**

| **Scoring — For Tutor Use** | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Student ID** | 2362088, 2361715, 2142462, 2360635, 2252500, 2359885, 2364564 | | | | | | |
| **Stage of Marking** | **Marker Code** | **Learning Outcomes Achieved (F/P/M/D)** | | | | | **Final Score** |
| | | **A** | **B** | **C** | **D** | **E** | |
| 1st Marker — red pen | | | | | | | |
| Moderation — green pen | IM Initials | The original mark has been accepted by the moderator: Y / N | | | | | Y / N |
| 2nd Marker if needed | | | | | | | |

## Section 1 — The Problem

*Why does this matter? Who is affected, and how often? Do not mention your product or solution in this section. (100–150 words)*

Many university students struggle to focus because of their smartphones. A big problem with apps like Forest is that you still have to unlock your phone to use them. Once you touch your screen, it is too easy to get distracted by messages or videos. Also, students often study in small dorm rooms or crowded libraries. After a few hours, the air gets stuffy. High carbon dioxide (CO2) makes people feel sleepy and lose focus, but normal mobile apps cannot detect this. Students really need a physical tool on their desk to keep them away from screens, block out distractions, and actively monitor their room environment to keep their minds fresh.

## Section 2 — Target Users

*Who exactly are you building for? Describe a real type of person, not a demographic category. (60–100 words)*

We are building this for university students (around 18-25 years old). Specifically, we are targeting students who are preparing for final exams or writing long essays in their dorms or the library. These students want to study hard, but they have weak self-control when their phone is nearby. They need a simple, nice-looking physical device on their desk to help them start studying immediately, without using a phone screen.

## Section 3 — The Solution

*What are you building, and what does it do for the user? Write from the user's perspective. No technology stack details. (100–150 words)*

FocusSync is a physical desktop companion that helps students stay focused without touching their phones. It uses simple physical actions to start a study timer and uses lights to show progress. It also monitors the room's air quality to prevent the user from getting sleepy. At the same time, the device sends all the focus time and room environment data (like temperature and CO2) to a computer dashboard built with Python and Streamlit. This allows the user to clearly see their daily study habits and understand how their room environment affects their learning efficiency.

### Key Features

*3–5 features in plain language. One line each. This is a starting point, not a commitment.*

- **Physical Start:** Users twist and press a real knob to set the timer, instead of tapping a phone app.
- **Visual Timer:** An LED light strip slowly turns off over time to show how much study time is left.

- **Desk Radar:** A distance sensor (ToF) checks if the user walks away from the desk or slouches too close to the screen.
- **Fresh Air Alert:** A gas sensor checks the CO2 levels and reminds the user to open a window if it gets too stuffy.
- **PC Data Dashboard:** The device sends data to a Python/Streamlit web page so users can review their study habits and room environment charts.

## Section 4 — Success Metrics

*How will you know if your product is actually working? 3–5 specific, measurable outcomes you can test. (50–100 words)*

- **Usability:** 80% of testers say that using a physical knob to start studying feels better than using a smartphone app.
- **Behavior Change:** Testers pick up their phones 30% less often during a 25-minute study session compared to when they use normal study apps.
- **Environment Action:** 70% of users actually open a window or take a break when the device warns them about high CO2 levels.

## Development Log Link

*Paste your SharePoint Dev Log link here before submitting. Set sharing to "Anyone at XJTLU with the link can view and comment."*
